

Updated on Monday, July 27, 2020

The following data analysis provides more information about Framingham residents who have received positive COVID-19 test results. This report includes cases and deaths in Long Term Care Facilities, and more. Please note that negative test results are not reported. Access to testing continues to be a challenge for many residents across the Commonwealth. This data analysis is intended to help us better understand the situation at the current time, and guide efforts to mitigate further disease transmission. This analysis is not a predictor of future trends. It will be updated weekly as additional positive cases are reported.

OVERVIEW

**Confirmed COVID-19
Cases**

1791

**Recovered COVID-19
Cases**

1577

**Deaths of Confirmed
COVID-19 Cases**

120

**Residents in
Quarantine**

14

**Residents in Isolation
(Active Cases)**

94

Count of Residents Tested¹

January 1, 2020 to July 22, 2020

COVID-19 TESTS OVER TIME

Data Sources: COVID-19 Data provided by the Bureau of Infectious Disease and Laboratory Sciences; Tables and Figures created by the Framingham Department of Public Health

¹Please note these numbers and rates reflect the number of persons tested, not the total tests performed, as of June 24, 2020. One person may have multiple tests.

These numbers are based on information available in the DPH surveillance database at a single point in time. Case counts change throughout the day as data cleaning occurs (removal of duplicate reports within the system) and new demographic information is obtained.

Percentage of Cases and Case Rate by Race/Ethnicity

The following caveats apply to these data:

1. Information on race and ethnicity is collected and reported by laboratories, healthcare providers and local boards of health and may or may not reflect self-report by the individual case.
2. If no information is provided by any reporter on a case's race or ethnicity, MDPH classifies it as missing.
3. A classification of unknown indicates the reporter did not know the race and ethnicity of the individual, the individual refused to provide information, or that the originating system does not capture the information.
4. Other indicates multiple races or that the originating system does not capture the information.

Note: COVID-19 testing is currently conducted by dozens of private labs, hospitals, and other partners and the Massachusetts Department of Public Health is working with these organizations and to improve data reporting by race and ethnicity, to better understand where, and on whom, the burden of illness is falling so the Commonwealth can respond more effectively. On 4/8, the Commissioner of Public Health issued an Order related to collecting complete demographic information for all confirmed and suspected COVID-19 patients

Percentage of Total Population and Percent of Cases by Race/Ethnicity

- Non-Hispanic Blacks represent 6% of the City of Framingham population but less than double that proportion of cases at 8% of COVID-19 cases
- Hispanics represent 20% of the City of Framingham population but less than twice that proportion of cases at 31% of COVID-19 cases
- Disparity between Whites and non-white populations would be even higher except many residents of Brazilian descent describe themselves as white.

Rate (per 100,000) of COVID-19 Cases by Race/Ethnicity

- The highest rates of positive cases are among Non-Hispanics Blacks and Hispanics which are more than 3x higher than the rate for White non-Hispanic
- Disparity between Whites and non-white populations would be even higher except many residents of Brazilian descent describe themselves as white.

Deaths and Death Rate by Race/Ethnicity

The following caveats apply to these data:

1. Information on race and ethnicity is collected and reported by laboratories, healthcare providers and local boards of health and may or may not reflect self-report by the individual case.
2. If no information is provided by any reporter on a case's race or ethnicity, MDPH classifies it as missing.
3. A classification of unknown indicates the reporter did not know the race and ethnicity of the individual, the individual refused to provide information, or that the originating system does not capture the information.
4. Other indicates multiple races or that the originating system does not capture the information.

Note: COVID-19 testing is currently conducted by dozens of private labs, hospitals, and other partners and the Massachusetts Department of Public Health is working with these organizations and to improve data reporting by race and ethnicity, to better understand where, and on whom, the burden of illness is falling so the Commonwealth can respond more effectively. On 4/8, the Commissioner of Public Health issued an Order related to collecting complete demographic information for all confirmed and suspected COVID-19 patients

Deaths by Race/Ethnicity in Confirmed COVID-19 Cases

- Count of Non-Hispanic White population is significantly higher than the other populations
- Disparity between Whites and non-White populations would be even higher except many residents of Brazilian descent describe themselves as white.

Death Rate (per 100,000) of COVID-19 Cases by Race/Ethnicity

- The highest death rates of positive cases are among non-Hispanics Whites and non-Hispanic Blacks which are more than 3x higher than death the rate for Hispanics
- Disparity between Whites and non-White populations would be even higher except many residents of Brazilian descent describe themselves as white.

■ Hispanic ■ Non-Hispanic White ■ Non-Hispanic Black/African American ■ Non-Hispanic Asian ■ Non-Hispanic Other ■ Unknown/Missing

Updated on Monday, July 27, 2020

Cases and Deaths by Primary Language

The following caveats apply to this data:

1. Information on primary language is identified by self-reported data point including: primary language, country of origin and ethnicity
2. A classification of unknown indicates the reporter has not been able to contact the individual or that the originating system does not capture the information.
3. Other indicates multiple primary languages not including English, Portuguese and Spanish.

Cases by Primary Language

Deaths by Primary Language

Total Cases: 1791
Total Deaths: 120

■ English ■ Other ■ Portuguese ■ Spanish ■ Unknown

Assisted Living Residences with Known COVID Cases

Facility	Maximum Capacity	Number of Confirmed Cases ¹
Branches of Framingham	104	<10
Brookdale Cushing Park	116	<10
Carmel Terrace	76	<10
Heritage House	102	<10

Data Sources: COVID-19 Data provided by the Bureau of Infectious Disease and Laboratory Sciences and the Massachusetts Department of Public Health COVID-19 Dashboard; Tables and Figures created by the Framingham Department of Public Health.

Note: 1. Includes residents only. This list includes Assisted Living Residences with at least 1 reported COVID-19 case to date (residents only). The number of cases for a facility relies on the amount of testing conducted. Some facilities have tested some or all residents only; some have also tested staff. A low number of cases may reflect that not all residents and staff have been tested, not necessarily low prevalence.

Updated on Monday, July 27, 2020

Residential Setting with Known COVID Cases

Cases by Residential Setting

Data Sources: COVID-19 Data provided by the Bureau of Infectious Disease and Laboratory Sciences; Tables and Figures created by the Framingham Department of Public Health.

Note: LTC & Health Care Facilities include Nursing Homes, Assisting Living Residences and Rehab Hospitals. Congregate Homes include rooming homes, group homes and shelters with at least 1 reported COVID-19 case to date. * Address information for these cases are currently being obtained.
